WALKER RILEY

Columbus, OH 43201 (Open to Remote) | (330) 401-8119 | walkerriley315@gmail.com
https://www.linkedin.com/in/walker-riley-2483091b3/ | https://github.com/wuksanity?tab=repositories

TECHNICAL SKILLS

Front End | TypeScript, JavaScript, React, Next.js (App Router), Tailwind CSS, Radix UI, HTML/CSS
Back End | Node.js, Python, Java, C, SQL, Ruby on Rails, Firebase (Auth, Firestore), Cloudflare R2 (S3)
AI/ML | ML clustering, Microsoft Azure (OCR), OpenAI API, LLM evaluation, prompt engineering, NLP
Testing/DevOps | Vitest, Playwright, Firebase Emulator Suite, JUnit, GitHub Actions CI/CD, Vercel, Git

EXPERIENCE

Freelance Full-Stack Engineer & Architect | StagewayPDX, Apr 2026 - Present

Gig-booking marketplace for Portland venues and musicians | Next.js 16 | TypeScript | Firestore | Cloudflare R2

- Sole engineer and sole client contact: turned business goals into specs, owned architecture through production support, and authored a technical brief for the client's legal counsel.
- Designed a race-safe emergency booking system: venues broadcast urgent requests to on-call artists within a haversine radius, and Firestore transactions enforce first-responder-wins server-side.
- Secured a 34-route API with Firebase ID-token verification, Firestore-backed rate limiting, and request validation, plus role-based Firestore Security Rules and presigned, server-keyed R2 uploads.
- Cut ~24K Firestore reads/hour: moved client polling into a scheduled cron sweep, shared realtime listeners across tabs via IndexedDB cache, and wrote a custom ESLint rule to prevent regressions.
- Root-caused production outages hidden outside the code (CSP blocking presigned uploads, Firebase authorized domains); guarded every fix with 1,900+ unit, security-rules, and emulator tests.

Freelance Full-Stack Engineer & Architect | Golden Goat, Oct 2025 - Sep 2026

Ethical film-distribution streaming platform | Next.js 16 | React 19 | TypeScript | Firebase | Vimeo API

- Sole engineer and sole client contact from concept to launch; advised on AVOD licensing, then integrated Google Ad Manager behind an IAB TCF v2.2 consent bridge with fail-safe entitlement checks.
- Built a content-based recommendation engine: weighted genre/director/cast/tag similarity scored against per-profile taste models from likes, watchlist, and watch history.
- Architected a Vimeo-to-Firestore ingestion pipeline on a GitHub Actions cron that reconciles removals, parses credits from video descriptions, and preserves curated editorial overrides.
- Migrated a Vite SPA to the Next.js 16 App Router with fail-closed rate limiting, CSP, and validated Security Rules, gated by 4-layer CI (Vitest, rules tests, Playwright E2E, post-deploy smoke test).

Artificial Intelligence Engineer | DataAnnotation, Oct 2024 - Jan 2025

Human-feedback training data for code-generation LLMs | Prompt Engineering | NLP | LLM Evaluation

- Probed code-generation LLMs with targeted prompts, documenting failure modes and accuracy gaps.
- Debugged and rewrote flawed model-generated code into best-practice solutions for training data.
- Refined fine-grained grading rubrics, adding, cutting, and tuning criteria for more reliable evals.

Machine Learning/Data Engineering Intern | Arch Capital Group, Jan 2024 - May 2024

Intelligent document processing for insurance | Python | Azure OCR | OpenAI API | SQL | JavaScript | UiPath

- Built a Python ML clustering pipeline that automatically sorted dozens of insurance document types, each with dozens of state-specific variants, into per-type extraction groups.
- Extracted fields from each cluster with Azure OCR and LLMs (GPT-4, Lazarus) at 99.5%+ confidence.
- Built a human-in-the-loop review UI and tuned models on Azure in a cross-functional Agile team.

EDUCATION

The Ohio State University- BS, Computer Science & Engineering with Mathematics Minor *(GPA: 3.23)*
